***Supplemental
Notice to Applicant***

1. Please correct the spelling of the Examiner's name.

Reasons for Allowance

2. Claims 1-4, 6, 15-17 and 20-24 are Allowed.
3. The following is an examiner's statement of reasons for allowance:

The cited prior art taken alone or in combination fails to teach the claims invention of establishing a plurality of design rules for an electric circuit design that includes a first component for triggering usage, a second component for conditioning and a third component for implementation where such components are appropriately stored as datafiles and appropriately specified as source code, compiled into object code and bound together to form a rule object at runtime.

The closest prior art (Kucukacaker et al, USPN 5,907,698) teaches design tasks associated with architectural design rules that compare a mapping of the system to a set of rules which are indicative of an error free system. Kucukacaker does not teach rules composed of three separate components including a trigger component, a conditioning component and an implementation component each stored separately and combined as object code to form a rule object at run-time.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
